How To setup your Linseis PC for Chip DSC

Index

1. Setup the hardware .......................................................................................................................... 3
2. Setup Windows OS ............................................................................................................................ 3
3. Setup the Linseis Software ............................................................................................................... 5
1. Setup the hardware

- At first make sure everything is delivered you need to setup your PC correctly

  □ Tower
  □ Monitor
  □ Keyboard
  □ Mouse
  □ Power cables
  □ Video cable
  □ USB-Stick (you can find this with your measuring device)

- Connect your monitor with the tower
- Connect mouse and keyboard with the tower
- Connect monitor and tower to power supply and turn everything on

2. Setup Windows OS

- Turn the PC on

- For the first time Windows will setup itself, you just need to follow the instructions and insert the information to your needs
- You need to connect the PC with the internet while setting up the device (Ethernet or WIFI)

- When the WINDOWS installation is finished, connect the provided USB-Stick with the tower

- Start the "Install"-Batch file and follow the instructions in the CMD-Window

- After you restart the PC, everything is setted up on your brand new Linseis PC
3. Setup the Linseis Software

- If the Windows-Setup finished you can start install the Linseis Software on your PC
- Start the Setup.exe from your USB-Stick

![Setup.exe from USB-Stick]

- Choose the device you want to install on your PC in the dropdown menu

![Setup menu]

- Click Ok and confirm the upcoming questions

The database for your device will be copied automatically from the USB-Stick

![Database copied]

- Connect your Linseis device with the PC and follow the instructions in the manual
- Now you can Use your Linseis Device and PC to your needs
